Student Assignment Brief

This document is intended for Coventry University Group students for their own use in completing their assessed work for this module. It must not be passed to third parties or posted on any website. If you require this document in an alternative format, please contact your Module Leader.

Contents:

- Assignment Information
- Assignment Task
- Marking and Feedback
- Assessed Module Learning Outcomes
- Assignment Support and Academic Integrity
- Assessment Marking Criteria

The work you submit for this assignment must be your own independent work, or in the case of a group assignment your own groups' work. More information is available in the 'Assignment Task' section of this assignment brief.

Assignment Information

Module Name: Web Development

Module Code: 5027CMD

Assignment Title: Portfolio

Assignment Due: 12 November 2026

Assignment Credit: 10 credits

Word Count (or equivalent): 4000 words

Assignment Type:

Percentage Grade (Applied Core Assessment). You will be provided with an overall grade between 0% and 100%. To pass the assignment you must achieve a grade of 40% or above.

Assignment Task

1.1 Requirement

You are required to work in a **group** to design, develop, implement, test and deploy a functional website. The group is expected to install, configure and secure a web server on your laptop. You are free to choose your own ideas for this website which can beneficial for Healthcare provider.

Your group must:

1. **Demonstrate creativity in designing the website.**
   The website should offer novel solutions, useful functionality or distinct features compared with other existing or similar websites.
2. **Use appropriate web development technologies.**
   You must use tools and technologies taught during this module, such as **HTML, CSS and JavaScript**. You may use other tools and technologies where appropriate; however, the technologies selected must be critically evaluated and justified in the report.
3. **Develop a functional website.**
   The website must demonstrate working features that address the identified requirements. Where appropriate, the website should include dynamic functionality, database interaction and API integration.
4. **Apply appropriate User Interface (UI) and User Experience (UX) principles.**
   The website should provide clear navigation, appropriate layout, readable content, consistent design and an effective user experience.
5. **Implement responsive design.**
   The website should be designed to provide an appropriate user experience across different screen sizes and devices.
6. **Apply appropriate security measures.**
   The group should consider website, client, server, API and database security where applicable. Authentication and authorisation should be implemented where appropriate to the website requirements.
7. **Deploy the website.**
   The completed website must be deployed to the chosen cloud or web server environment and must be accessible during the demonstration.
8. **Use version control.**
   The group must create a **GitHub repository** containing the source code and development files. The repository should provide evidence of the development process and individual group member contributions.
9. **Do not use commercial website development software as the primary development platform.**
   For example, using Dreamweaver or Drupal to create the website is not allowed. Any third-party packages or libraries used must be appropriately justified and acknowledged.
10. **Maintain evidence of development.**
    Students should retain evidence such as design drafts, wireframes, development work, testing records and GitHub commit history.

This document is intended for Coventry University Group students for their own use in completing their assessed work for this module. It must not be passed to third parties or posted on any website.

1.2 Group Report – 70%

You must submit **one group report** documenting the design, development, implementation, testing and deployment of the website.
The word limit for the report is **4,000 words**, excluding references and appendices.
The report must address the following areas:

Networking

Provide an explanation, using one or more examples from your API and website, showing how your website uses **HTTP to request and send data over the Internet**.The report should demonstrate a good technical understanding of the HTTP protocol and its correct use.For higher grades, you should discuss how **authentication and authorisation** have been implemented within the website/API, where applicable.

Security

Provide an explanation of how you configured and deployed your application to the selected cloud/server environment. Explain the deployment process and the purpose of each major step. For higher grades, provide examples showing how you implemented security within the API and website, including client-side security, authentication, authorization, input validation, database security and secure handling of data.

Data

Provide an explanation of how your database tables relate to the resources and collections in your API. Where a database is implemented, the report should include an **Entity Relationship Diagram (ERD)** showing the database structure. For higher grades, demonstrate how the database has been normalised to at least **Third Normal Form (3NF)** and explain how security and performance have been improved through appropriate techniques such as **low-privilege database accounts and indexes**.

1.3 GitHub Repository

You must create a **GitHub repository** that contains all source codes and relevant development files for your website. You must include the URL of your repository on the cover page of your report.

1.4 Use of Gen AI

Gen AI tools can be used in an assistive role in the web development. You are required to indicate clearly in the report if any part of the code were used generated by AI.

This is AMBER category of Gen AI.

This document is intended for Coventry University Group students for their own use in completing their assessed work for this module. It must not be passed to third parties or posted on any website.

Submission Instructions:

The student required to submit the **Group Report** through Canvas by the stated dateline above. The acceptable format of the report is PDF only. Any other report format submission will lead to 0 marks.

You need to demonstrates how your website works on week 14-15. In this demonstration, you must:

1. Show you website running and deployed in the chosen cloud environment
2. Explain features of your website and how those meet your design requirements.
3. Show parts of your source codes that implement the features mentioned above can be clearly viewed
4. All group members must participate in the demonstration and be able to explain their individual contribution.

Development of Skills and Attributes

Think Creatively

In the Web Development course, **creative thinking is a core skill**. It underpins the concepts of programming, website design and problem-solving and is therefore assessed throughout this assignment.

Marking and Feedback

How will my assignment be marked?

Your assignment will be marked by the module leader.

How will I receive my grades and feedback?

Provisional marks will be released once internally moderated.

Feedback will be provided by the module leader alongside grades release.

Marks and feedback can be accessed by going to the Grades on Canvas system. Your provisional marks and feedback should be available by end of the semester. **What will I be marked against?**

Details of the marking criteria for this task can be found at the bottom of this assignment brief.

This document is intended for Coventry University Group students for their own use in completing their assessed work for this module. It must not be passed to third parties or posted on any website.

Assessed Module Learning Outcomes

The Learning Outcomes for this module align to the marking criteria which can be found at the end of this brief. Ensure you understand the marking criteria to ensure successful achievement of the assessment task. The following module learning outcomes are assessed in this task:

1. Construct a data-driven dynamic website which utilize server-side scripting and page templating.
2. Analyse the suitable database technologies for the web.
3. Demonstrate the concept of user interfaces based on proven UX principles.

Assignment Support and Academic Integrity

Spelling, Punctuation, and Grammar:

You are expected to use effective, accurate, and appropriate language within this assessment task.

Academic Integrity:

The work you submit must be your own, or in the case of groupwork, that of your group. All sources of information need to be acknowledged and attributed; therefore, you must provide references for all sources of information and acknowledge any tools used in the production of your work. We use detection software and make routine checks for evidence of academic misconduct.

It is your responsibility to keep a record of how your thinking has developed as you progress through to submission. Appropriate evidence could include version-controlled documents, developmental sketchbooks, or journals. This evidence can be called upon if we suspect academic misconduct.

If using Artificial Intelligence (AI) tools in the development of your assignment, you must reference which tools you have used and for what purposes you have used them. This information must be acknowledged in your final submission.

Unable to Submit on Time?

Student will be graded as ZERO if they are unable to submit on time.
